

Are all sharks dangerous to people?

There are many reasons why people think that sharks are deadly predators. They have thousands of razor sharp teeth which are always being replaced. It's said that there are around one hundred shark attacks on people each year but only ten of those people die. Great white sharks have even been known to attack boats.

Although many people believe that sharks are dangerous, there are many species of shark that won't attack people. Shark attacks are very rare and some people like to swim with sharks. If a shark bites you and it notices that you are not its prey the shark will leave you alone. The biggest shark is the whale shark but it's completely harmless.
