Topic: Water

Understanding of the World

1. Research an animal that lives in water. Can you answer the following questions:
 - What type of water do they live in?
 - What do they eat?
 - What helps them to live under the water?
 - How do they move?
2. Collect ten (waterproof) objects from around the house. Predict whether they will float or sink, then test your predictions. See if you can work out why you were right or wrong!

3. Create some ice cubes. You could try adding sugar, salt, or different food colouring to them. See if they melt differently!
