

**Understanding of the World**

1. On your walk, see if you can find a dandelion and work out which stage of its lifecycle it is in. Research why dandelions change and why their seeds blow so far away. There are some great time lapse videos online of dandelions changing too.

2. Plant a seed from an apple, tomato, avocado, orange, strawberry etc. and see what happens! Try planting them in a pot inside and watering them regularly.
3. When your grown-up emails us about your learning, see if you can take the photos or videos yourself using a phone or tablet, or even a digital camera.
