

You will need number cards 0-20.

All children should be able to complete steps 1 and 2. If your child is not able to complete step 2 independently then step 3 does not need to be completed.

Step 1

Choose two number cards (0-20) and make 5 number sentences using $<$ $>$ or $=$.

Step 2

Complete each statement in 3 different ways.

$$\square > 14$$

$$\square < 8$$

Step 3

Using these digits [11, 12, 13, 14] make as many statements as you can.

$$\square < \square$$

$$\square > \square$$

$$\square = \square$$
