

Year 1 Learning Update: 24/9/21

English:

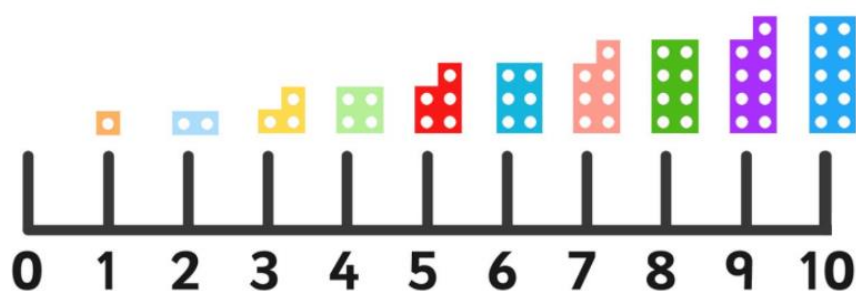

We are going to be learning about riddles over the next few weeks, focusing on animals.

At home...

- You could read some riddles
- You could give each other clues to guess an object

Maths:

We are going to learn to recognise odd and even numbers. We will talk about how even numbers all have a partner. This is particularly clear using numicon shapes:

At home...

- Practice pairing up a number of objects to check if it is odd or even. You could use pieces of pasta or Lego blocks or anything else you have handy!

Wider Curriculum:

Science: We are going to compare our feet with a partner, make predictions about who will have larger feet and make observations to see if our ideas are correct.

At home...

- You could compare the size of hands - does the oldest person have the biggest hands?

RE: We are learning about the celebration of harvest, and will be celebrating with a special harvest assembly next week.

At home...

- You could talk about how you celebrate special times as a family
- You could make a special trip to the shops with your child to choose some food to donate to the Waterlooville Food Bank (please bring donations to school).
- **History:** On space day we learnt about Neil Armstrong, Buzz Aldrin and Michael Collins who were part of the first mission to the moon. Next week we are going to learn about some of the other people who helped in the first moon landing: Margaret Hamilton and Mary Jackson

At home...

- Can your child remember the people who went to the moon? You could find out some more facts out about their lives.
